

Commissioning Engineer

Office Location: *Valley Forge, PA / Client Sites*

Salary: *Commensurate with experience*

Job Description

A Commissioning Engineer responsible for the authoring and execution of test protocols for startup, commissioning, and qualification activities. The Commissioning Engineer will also provide support for RPA process and instrument and control design activities. This individual must be capable of working in an interdisciplinary environment as a contributing team member and independently on a wide variety of projects.

Typical Duties:

- Author startup, commissioning, test protocols for mechanical, electrical, and automated systems.
- Field execution of test protocols for mechanical, electrical, and automated systems.
- Represent RPA at onsite client meetings.
- Interact with clients, managers, vendors, contractors, and colleagues within RPA.

Additional Responsibilities:

- Interact with a variety of departments such as Validation, Engineering, Project Management and Quality Assurance, among others.
- Provide on-site startup, troubleshooting, and engineering services support to the client.
- Provide process and instrument and control design support.

Education/Experience:

- Engineering or science degree from ABET accredited university program.
- Minimum of five years related experience within a manufacturing environment.
- Must have experience with DCS, PLC, and other automation and control systems.
- Experience in a FDA regulated environment is a plus.
- Facilities Engineering support experience is a plus.

Skills and Special Requirements/Licensing:

- Excellent attitude, attention to detail and interpersonal relationship skills.
- Excellent documentation practices.
- Excellent organizational skills.
- Self-motivated and driven to succeed.

Work Environmental & Physical Demands:

- Must be willing and able to work additional or off hours on projects as required to satisfy the client's deadlines.
- Must be will and able to travel to client sites for test execution in laboratory, manufacturing, or office environments.
- Capable of working independently and within a team framework.
- Sensitive to client's needs and demands.
- Ability to work within project budget and schedule requirements.
- Capable of multi-tasking on different projects.
